

The Chelsea Park Wildlife Garden Plant List

The Chelsea Park Wildlife Garden was designed by NESST member Julie Dysart as a nectar and pollen rich garden with the aim of:

- Providing resources for our local pollinators and other animals and birds, especially in winter.
- Providing nectar & pollen in the June gap between the peak spring and high summer flowering seasons.
- Using plants that are attractive and relatively easy to find, with the hope of inspiring more people to include plants to support our local wildlife in their own gardens.

The following is a list of trees and plants with photos that make up the garden design.
